

# Nomad Nexus

October, 2025

The NOMAD product line combines simplicity with state-of-the-art technologies for environmental cooling, heat dissipation, and IT hardware integration. Designed for resilience, NOMAD is ideal for supporting emergency relief efforts, energy sector operations, and armed forces deployments where durability and reliability are non-negotiable.

Our inaugural product, Nexus, is engineered to military standards with a primary focus on mobility, field serviceability, and redundancy. Nexus can accommodate up to four IT hardware racks, allowing for a diverse blend of vendor offerings.

## Key Features

This multi-vendor approach is a core feature, ensuring maximum customer uptime and protecting against several key vulnerabilities:

Vendor: Lock-in and Obsolescence - Diversifying hardware prevents reliance on a single provider and mitigates risks associated with product depreciation.

Single Points of Failure: The redundant design safeguards against outages caused by cyber-attacks, hazardous environments, or natural disasters.
